

## **PRESS INFORMATION**

**April 2008**

### **KIP9000 open architecture integrates seamlessly with existing systems**

**KIP UK Limited, the UK's only dedicated supplier/manufacturer of wide-format digital reprographic systems, has launched their most powerful integrated production system to date – the KIP9000. KIP's open architecture philosophy means that the KIP 9000 can easily and seamlessly be integrated with existing work environments and information systems without the need for extensive retraining.**

The innovative technology found within the KIP9000 system is simply and easily controlled using the touch screen Image Processing System (IPS). The IPS drives all aspects of the system, enabling easy connectivity with IT infrastructures to bring multifunction capabilities and fast file processing speeds without need for additional pc's and applications.

With this technology at your fingertips, all the demands of high production printing and imaging environments are readily met. Fast and flexible, the KIP IPS solution is widely regarded as the most open, integrated and powerful wide format system software available. It automatically discovers KIP systems available over the network for easy connectivity, system setup and configuration. Automatic emails can be sent to all users notifying them of both machine and job status, and this using existing email systems.

All systems in the KIP range print from all major software packages on Windows, Linux, Mac or Unix platforms and include native DWF batch processing to print complex drawings at optimum quality and at a speed of 22 A1 prints per minute.

From web-based viewing and printing of documents in a wide range of formats, to PC job submission and application drivers, the software streamlines production print work, saves time and increases productivity.

KIP AutoCAD driver enables printing directly from AutoCAD applications. To help users, two-way printer status allows you to view media information and system status. The AutoCAD driver is compatible with AutoCAD software versions 2000 and up.

If you have a set way of working with familiar software we have made the transition to KIP hardware as simple and painless as possible by having applications that allow us to seamlessly connect with your existing working practises with little change to current workflow. KIP can also provide an application programming interface (API) to allow users to fully integrate with their current system. This ensures that investment in existing information management systems is secured, and removes the need to purchase a new suite of software simply to take advantage of the latest printing technologies.

To learn more about the various configurations' of the KIP 9000, to arrange a demonstration, quotation or cost of ownership proposal to see how it could benefit you, please contact KIP on +44 (0) 1327 304601 or visit [www.kipuk.com](http://www.kipuk.com).

**Editors' notes:**

KIP UK is the UK subsidiary of the Katsuragawa Corporation Japan, one of the reprographic industry's most renowned innovators in digital scanning and printing systems.

The UK company was formed in 1988 to specialise in the area of wide-format image capture, storage and retrieval solutions. The KIP product range now covers everything from low volume budget priced analogue copiers through to fully integrated and networked digital scan-to-file and print systems.

KIP UK is the only major supplier of digital reprographics systems in the UK dedicated entirely to the wide format market. This gives them a unique focus on wide format technology.
